THE INFLUENCE OF THE EXISTING ATTRIBUTES OF DISTINCTIVE  
BUILDINGS ON THE RESIDENTS' PERCEPTION OF AL-KHUMS'S CITY  
IDENTITY

By

**ABUBAKER OMAR A. KARIT ALLA**

**NOVEMBER 2017**

Chair: Prof. Dr. Zulkifli Bin Hanafi

Faculty: Architecture and Built Environment

This research is a case study that examines the concept of City Identity with an emphasis on the city image of Al-Khums, a coastal city of Libya. In this research, identity was defined as the attributes of a place that is recognized or recalled as being distinct by the people. Identity is a critical issue in Al-Khums. The city's overall image including similar forms, does not possess an identity. There is a lack of distinctive character within the recent developments in Al-Khums. The aim is to investigate the elements and attributes associated with identity of the Al-Khums city as perceived by the residents. Finding out the distinctive elements of the city was the primary objective of this study. Establishing the characteristics linked towards those distinctive elements was the second objective of this study. Discovering the variation between different residents and their identification of distinctive elements of the city were the third objective of this study. The last objective was to uncover the evaluation and feelings of residents toward the city. Mixed methodology such as quantitative and qualitative approaches in the collection and analysis of data are utilized in this research. A survey was utilized for the quantitative approach via a questionnaire that was developed on a sample of the residents of Al-Khums. 330 residents originating from various sections of the city were considered in the sample survey. Techniques such as interview, free sketch task and visual survey were adopted under the qualitative approach. The interview essentially involved twenty-seven professional architecture and urban

design residents. Using Microsoft Excel 2013 and Statistic Package for the Social Sciences, the information were gathered and scrutinized. SmartPLS was also utilized to conduct a structural equation modeling (SEM) approach to run cross analysis and content analysis for convergence of both qualitative and quantitative information. There are four main findings of the research Firstly, The imageable buildings of Al-Khums were based on eleven identified buildings. Secondly, the Characteristics distinctive elements (buildings and structures) are influenced by physical appearance, activities and the meanings. The physical appearance has a dominant influence on the building's identity in Al-Khums. The third finding is that there are no significant differences between the genders (male and female) when it came to identifying the city elements. With regards to age, a significant difference was found between the age differences and their perceptions of buildings and structures. Finally, there are non-significant measurements of the dimensions. Furthermore, mentioned items talked about visual impression of the city image, relationship between traditional form and current form of building and Al-Khums's urban form is vivid, legible and memorable as focus of interest to the Al-Khums authority and environmental stakeholder on their decision and urban planning policy. This study fundamentally contributes to enhancing literature dedicated to urban design and architecture by identifying Al-Khums building and structure through different dimensions and items to bring about the easy sustainability of buildings and structures in the city. All the models were new and could contribute to the enhancement in the academic field as well as being the main guideline for the practitioners in making their decisions for future development to create the city's image and identity.

## ACKNOWLEDGEMENT

All praise be to Allah, the Most Merciful, for His Love and Guidance. Salute on the Prophet Muhammad (PBUH), his family, and fellow companions.

It would not have been possible to write this doctoral's thesis without the help and support of the kind people around me, to whom goes my deepest appreciation. First, I would like to sincerely thank my beloved parents, in memory of my father who passed away before I was born. Thanks to my mother brothers and sisters who supported me from childhood to date. Their love, wisdom and encouragement during those times were most valuable and treasured. If it had not been for their contribution, I would not have been successful in my studies.

I feel indebted to my great supervisor, Professor. Dr. Zulkifli Bin Hanafi, without whose support, guide and comments I could never have been successful. His invaluable pieces of advice were the source of light enlightening the vague pathway before me. Not only a knowledgeable supervisor, but also he has always been a wonderful friend of mine.

The next appreciation goes to my family who were inspiring and understanding allowing me to concentrate on my studies and writing this thesis. Words cannot express my gratitude to my wife, Rima Abdussalam, as she was a great company and support encouraging me to pursue my studies and my beloved children Abdualrahim Abubaker Karit Alla and Almntsr Billah Abubaker Karit Alla. Last but not the least, I would like to thank all the staff at Infrastructure University Kuala Lumpur (IUKL) who were kind enough to provide an academic environment for me, as well as other students.

## **APPROVAL**

This thesis was submitted to the Senate of Infrastructure University Kuala Lumpur (IUKL) and has been accepted as fulfilment of the requirement for the degree of Doctor of Philosophy in Built Environment. The members of the thesis Examination Committee were as follows:

Assoc. Prof. Dr: Manal Mohsen Abood  
Director Centre for Postgraduate Studies  
Infrastructure University Lumpur (IUKL)  
(Chairman)

Dr. Golnoosh Mantegh  
Faculty Architecture and Built Environment  
Infrastructure University Kuala Lumpur (IUKL)  
(Internal Examiner)

Prof .Dr. Nik Lukman Nik Ibrahim  
Faculty of Engineering and Built Environment  
University Kebangsaan Malaysia (UKM)  
(External Examiner)

Prof .Dr. Ahmad Sanusi Hassan  
School of HBP.  
University Sains Malaysia (USM)  
(External Examiner)

# CHAPTER 1

## INTRODUCTION

### 1.1 Introduction

This research examines the concept of city identity of Al-Khums, the coastal city of Libya. The primary concern is to explore the elements and attributes that residents associated with the city's identity. Identity according to (Auclair & Fairclough, 2015; Khirfan, 2014) and support by Lynch is "*the extent which a person can recognize or recall a place as being distinct from other places as having a vivid or unique or at least a particular character of its own*" (Lynch, 1981, p.131). Lynch's interpretation of identity was adopted by this study, in which the distinctiveness of the elements and the attributes that residents linked with the identity of the study was examined. These elements play a significant aspect in shaping the image of the city and people link them with identity in the city. Particular properties of the high imageable elements and elements linked with the identity of the city are also looked into in the research. In order to do so, the Al-Khums resident's opinions of the physical environment is studied via measurement of urban imageability and other form-making attributes (Physical, Activities and Meanings).

The general form of the study and the basis in which the results of the inquiry are presented are elaborated in this chapter. The first section will also point out the research problem while the following section gives an overview of the aims, objectives and research questions. The research agenda is explained in the third section followed by a presentation of the research methodology and techniques in the fourth section. Case studies are included in the fifth section while the limitations of this research are discussed in the sixth section. Lastly, the general structure of the thesis is presented in the final section.
